VOICE OF PEOPLE 2005

CAMBODIA

NOVEMBER 2005

This is a publication of the Center for Social Development (CSD), Phnom Penh, Cambodia. CSD is a non-governmental organization, advocating for good governance through the institutionalization of democratic values and principles. CSD supports social equity and justice and sustainable economic development by building citizen participation in the democratic process. CSD conducts public meetings on national issues, and acts as a non-partisan and neutral forum for open and candid debates on issues of concern to society.

FOREWORD

The Global Corruption Barometer is one of Transparency International's tools for measuring corruption internationally. Through its focus on public opinion, the Barometer complements the Corruption Perceptions Index and Bribe Payers Index, which are based on the opinions of experts and business leaders. First carried out in 2003 in 45 countries, and then again in 2004 in 64 countries, the Barometer now in 2005 encompasses almost 70 countries - including previously uncovered nations such as **Cambodia**, Chile, Ethiopia, Paraguay, Senegal, Serbia, Thailand and Ukraine.

The Center for Social Development has conducted a study on "The Corruption Perception Barometer (CPB)". This study is conducted through the *Gallup International Questionnaires* forms of people's perception on corruption and general knowledge about corrupt practices.

The findings of the study have built on qualitative and quantitative analyses, which were also responsible for producing the quantitative part using reliable and sufficient methodology. The qualitative research part of the study was conducted through social anthropology, a method included in the Barometer Guidelines.

The Global Corruption Perception Barometer can be used to raise awareness of the extent and impact of corruption, as judged by the general public. Questions targeted a levels of corruption in institutions/sectors, for instance, can point to those areas or institutions with poor reputation that may be ripe for reform.

The Barometer is the only indicator to capture public opinion about corruption in a wide range of countries, providing opportunities for cross country comparisons. Most of the TI chapters as well as the Centre for Social Development who is the TI- Chapter in Formation have been responsible in the Survey on Barometer, using the results to support CSD work and define priorities of action to fight against corruption in Cambodia.

Chea Vannath
President

ACKNOWLEDGEMENT

The Center for Social Development (CSD) would like to express its thanks and appreciation to all participants in this national representative survey on “Corruption Perception Barometer.” Thanks also go to the national and local authorities throughout the country for allowing this research to proceed and be undertaken smoothly.

A special thank you and appreciation is conveyed towards the Center for Advanced Study (CAS) for its efforts and dedication in completing this survey.

CSD would like to thank CSD staff for valuable input including Mr. Heav Veasna, Dr. Neou Sun, Mr. Sok Sarith, Mr. Oum Nareth and Mr. Adam Saltsman.

Finally, we would like to extend our thanks and appreciation to PACT-Cambodia and Japan International for Cooperation Agency (JICA), whose financial support made this project a reality.

Chea Vannath
President

INTRODUCTION

The Cambodian government recognizes that corruption is a common, pervasive and destructive phenomenon and has made fighting against it part of the heart of its so-called rectangular strategy to promote growth, employment, equity and efficiency.

The Center for Social Development in cooperation with PACT has initiated an opinion poll on perception and experience of corruption by normal citizens in their everyday life interactions with civil servants and public institutions to contribute to the five question multi-country public opinion survey TI Global Corruption Barometer: Voice of People 2005. This study is envisioned to be a source of ordinary citizens' voices in the Cambodian corruption debate.

By asking the general public their views on their perception and experience of corruption on a yearly basis, the Global Corruption Barometer aims to provide an overall indicator of the general public's concern about corruption. Over time, it also aimed to provide an indicator of the relative success of effort to curb corruption within institutions/sectors and across countries. Above all, Transparency International also aims at using it to measure trends.

The results of this study, which will be integrated into the edition of Global Corruption Barometer, is planned to be published in December 2005.

The instrument used in the study was a five question battery designed by Gallup International to allow for comparisons with data generated with Corruption diagnostics of different countries. Apart from these five questions, the study includes some standard background questions: sex, age, income, education attainment, employment and religion.

SURVEY METHODOLOGY

This survey was conducted by the Center for Advanced Study, the independent NGO research institution located in Phnom Penh.

Questionnaire

The questionnaire was designed by TI Global Corruption Barometer.

Location

The survey designed by way of a nationally representative proportionate sampling scheme.

Respondents

The survey covered 600 citizens aged 15+ and their households.

Timetable

The fieldwork took place over about 2 weeks from 9 to 20 October 2005 by four teams of four field workers each, through face to face interviewing.

Sampling

A survey with a representative coverage of the country's over-15 population (4% error margin with a 95% confidence interval) needs 600 respondents from 100 Primary Sampling Units (villages).

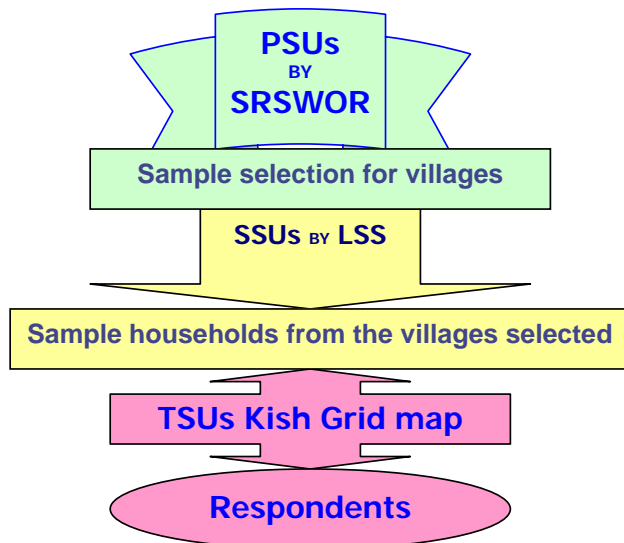

Determine Sample Size	
Confidence Level:	<input checked="" type="radio"/> 95% <input type="radio"/> 99%
Margin of Error (%):	<input type="text" value="4"/>
Population Size:	<input type="text" value="7873278"/>
Sample size needed:	<input type="text" value="600"/>

Sampling frame

The General Population Census 1998 database of the National Institute of Statistics (NIS) - with the updated villages that were not included in the census - have been used as the sampling frame for the sampling design of the survey.

Survey design

The sampling design for this survey adopted a multi-stage sampling selection procedure (see structure)

PSU = Primary Sampling Unit
 SSU = Secondary Sampling Unit
 TSU = Tertiary Sampling Unit

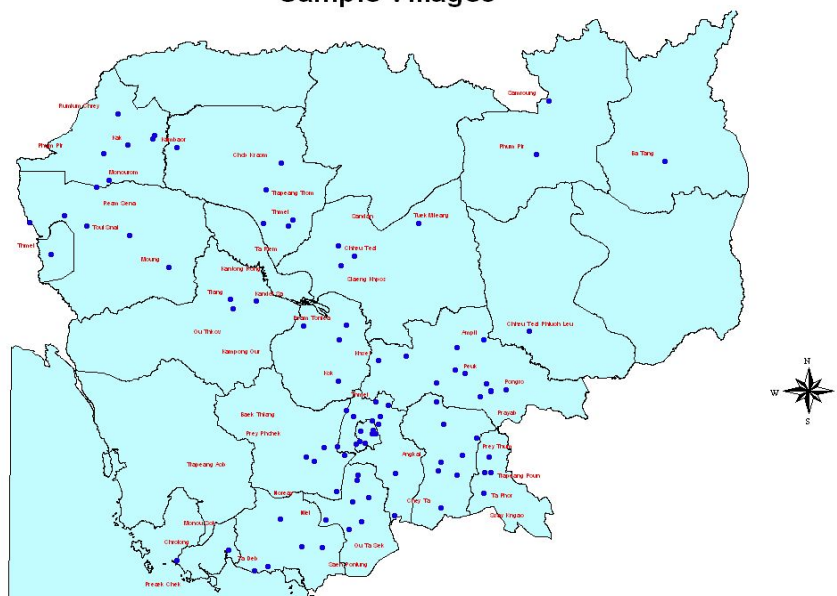

Sample size of PSUs, SSUs and TSUs

Domains	Aged 15 over	Samples		
		PSUs Villages	SSUs Households	TSUs Respondents
Kampong Cham	1027967	13	78	78
Kampong Chhnang	313071	4	24	24
Kampong Spue	403291	5	30	30
Kampong Thum	367430	5	30	30
Kandal	757232	9	54	54
Phnom Penh	753691	10	60	60
Prey Veng	617133	8	48	48
Pousat	269168	3	18	18
Siem Reap	443908	6	36	36
Svay Rieng	319432	4	24	24
Takeo	532673	7	42	42
Banteay Meanchey & Otdar Meanchey	483668	6	36	36
Bat Dambang & Krong Pailin	610719	8	48	48
Kampot & Krong Kep	386433	5	30	30
Kah Kong & Krong Preahsihanouk	182315	2	12	12
Kratie&Preah Vihear&Stueng Treng&Mondul Kiri&Ratanak Kiri	405147	5	30	30
Total	7873278	100	600	600

Notes * only regular households counted

1-The first-stage sampling selection

The NIS uses an algorithm that takes province and provincial population, down to village and village population, and the urban/rural distinction into account and creates a Simple Random Sample Without Replacement (SRSWOR)

Sample Villages

2- The second-stage sampling selection

The households are selected in each individual sample PSU (village) by using Linear Systematic Sampling with equal probability of selection (LSS-EQP). A random starting point is selected at the perimeter of the village using the last digit (R1) of a local currency serial number and the sample of 6 households is selected by the random start plus an interval of:

$$R = R1, R2 = R1 + I, R3 = R1 + 2I, \dots, R6 = R1 + 5I$$

Where:

I = Interval = 5 for small village (Less than 100 households)

I = Interval = 10 for big village (More than 100 households)

3- The third-stage sampling selection

Within each individual sample household, the Kish Grid map is used to select the respondent (See example below). The Kish Grid guarantees equal percentages of males and females selection in the selected villages.

**The Sample selection map
Using for respondent selection**

Name of person in aged 15+			Sex		Serial number of questionnaire					
No	Name	Age	M	F	1	2	3	4	5	6
1	A		1	2	1	1	1	1	1	1
2	B		1	2	2	1	2	2	1	1
3	C		1	2	3	1	2	3	2	1
4	D		1	2	4	2	3	3	1	2
5			1	2	5	2	4	5	2	3
6			1	2	6	5	1	2	3	3

Ex : Household no 3 Mr C is to be respondent for interviewing

Although this is the customary way of sampling in Cambodia, it does mean that the sample excludes all Cambodians without shelter, and those in residential care, be it hospitals, jails or other institutions. The bias introduced is hard to estimate, and limited.

Note* Spelling of administrative units was taken from National Population Census 1998

Data-collection and data-entry

Survey team and supervision

The team consisted of 12 members: four teams of two enumerators and one supervisor each. The size of the teams enabled the supervisor to sit in on approx. one to two interviews per enumerator per three days, making for an adequate number of observed interviews (approx. 10%). In addition to the regular supervision, the research coordinator conducted spot checks and was in near daily telephone contact with the teams. The supervisors also ensured proper execution of the household sampling procedure and ensured uniform application of probing procedures.

Quality control

Supervision is crucial but not the only aspect of quality control. The other elements are:

- The questionnaire contained detailed interviewer instructions, spelling out what to do;
- Where relevant, the interviewer training included concrete examples for non-suggestive probing and where possible, these were included in the above-mentioned instructions;
- Field editing: each enumerator was required to check completeness of the questionnaire before leaving the household. A second check was performed by the supervisor, and if necessary the enumerator was sent back to clarify or complete information.

Interview time

The estimated interview time per questionnaire was 20 minutes.

Data entry and cleaning

Writing the data entry template and data entry itself was done in-house. Data entry followed normal double entry procedures. Extensive logical checks and cross-tabulation checks were executed to ensure a clean data set. The strict quality control procedures applied (see above) enabled the inclusion of all questionnaires collected into the dataset.

FINDINGS

Respondent knowledge

The questionnaire did not probe respondents' knowledge of particular institutions directly. That is, no questions of the "Have you ever heard of..."/"Do you know..." kind were asked. However, indirectly, expressing an opinion signifying knowledge and lack of knowledge is expressed by giving a "Don't know" answer. Obviously, "Don't know" might mean more things, most importantly an unwillingness to answer (e.g. it might reflect the socio-political sensitivity of an issue). In other words, the "aware" score of a particular question is only an indicator of respondents' knowledge.

Our data set shows pretty obvious patterns regarding how ordinary Cambodians experience and think about corruption in the public sector and how it affects their livelihood.

CORRUPTION'S IMPACT ON PERSONAL AND FAMILY LIFE, BUSINESS ENVIRONMENT AND POLITICAL LIFE

Table 1: Corruption's impact on personal and family life and business environment is of more concern than impact on political life

	Corruption affects		
	Your personal and family life	Business environment	Political life
Not at all	25.7	25.4	23.9
To a small extent	24.4	20.7	12.5
To a moderate extent	22.2	24.2	18.2
To a large extent	21.8	20.6	14.1
DK/NA	5.9	9.2	31.3
Total	100.0	100.0	100.0

The Voice of People 2005 evaluated the extent of corruption's impact on three spheres of life, on personal and family life, business environment, and political life. As indicated in table 1 the impact of corruption on personal and family life as well as on business environment is of more concern than impact on political life.

Around a quarter of respondents claimed that corruption did not affect their personal and family life as well as the business environment at all. However, a high percentage of them indicated that corruption affects their personal and family life (68.4%), the business environment (65.5%), as well as the political life of the country (44.7%). High income respondents are much more likely than other income classes to say that corruption *strongly* affects their personal and family life (69.6.8%) and business environment (68.3%) (See Annex 3: table 1A and 1B).

ASSESSMENT OF THE CORRUPTION LEVELS IN THE PAST THREE YEARS AND IN THE NEXT THREE YEARS

Table 2: Cambodians become less pessimistic about the anti-corruption process

	In the past 3 years, how has the level of corruption in this country changed?	Do you expect the level of corruption in the next 3 years to change?	Likelihood
Increased a lot	28.4	18.6	-9.8
Increased a little	23.8	20.2	-3.6
Stayed the same	25.6	15.5	-10.1
Decreased a little	11.0	16.1	5.1
Decreased a lot	1.7	4.5	2.8
DK/NA	9.4	25.1	15.7
Total	100.0	100.0	0

These two questions are indicators for public opinions about the corruption level in the country getting better or worse, and about the perceived success of the fight against corruption.

The *likelihood* in table 2 suggests that people's expectation of the corruption level is getting a bit better: the number of people who think that the corruption will *increase a lot* and *a little* has declined and vice versa for the number of people who think the corruption will be *decrease*. There are still *more* respondents expecting an increase than a decrease but the difference between the 'optimists' and 'pessimists' is *less* when asked about the future than when asked about the immediate past. This implies that Cambodian people start to expect the ongoing efforts to fight corruption and promote transparency in the country to have some effect. Perhaps because fighting corruption is now one of the corners of the rectangular strategies of the government, this indicates more intention for action than in the past. However, less people are aware about the situation of corruption in the next three years (25.1% of all respondents), especially female respondents (36.2%) (See annex 3: table 2A).

ASSESSING INSTITUTIONS AND SECTORS

Reporting of results

The following battery of questions asked respondents for their opinions about the integrity of different institutions or sectors. For this question respondents are asked to express their opinion or judgment in terms of a five point scale from *not at all corrupt* to *extremely corrupt*, with several possibilities for the data-collector to score *don't know* (can't choose, refuses to answer, doesn't know this institution,...). For purposes of reporting we have chosen to focus on a **one-figure indicator of respondents' opinion**: their so-called Net Opinion.

Those respondents who express an opinion, also called the *aware* respondents, may have favorable, neutral or unfavorable judgment. **The Net Opinion is favorable % minus unfavorable %, and is +100 if unanimously favorable, -100 if unanimously unfavorable, and 0 if opinions are exactly divided.** Either the total population interviewed or the *aware* segment of the total sample, that is those respondents who expressed an opinion/who did not score "don't know", can be used as the basis for calculating the Net Opinion. In this study we apply the more usual version of Net Opinions referring to that segment of the respondents who actually expressed an opinion, the *aware* respondents. When results are presented both the size of the *aware* segment (as a percentage of the total sample) and the Net Opinion are reported. Therefore, what the Net Opinion tells one about those that expressed an opinion is by how much percent the positive opinions outweigh the negative opinions.

For example the assessment of integrity of *legal system/judiciary* in table 3 can be interpreted as the following:

- Aware (83.9 %) indicates the percentage of respondents with answers ranging from *not corrupt at all*, a little corrupt to *extremely corrupt*, excluding the 16.1% who said that they *don't know*.
- Net opinion (-77.7%) is the percentage with which was the negative opinion about the legal system/judiciary (80.8%) ranging from *a little corrupt* until *extremely corrupt* outweighs the positive answers (3.1 %) of those who said *not corrupt at all*.

Table 3: The legal system/judiciary, police and customs are seen the most corrupt, only NGOs are seen in a positive light

To what extent do you perceive the following sectors in your country to be affected by corruption?	Aware	Net opinion (GCB)	Net opinion CSD 2005	DK/NA
Legal system /Judiciary	83.9	-77.7	-77	16.1
Police	87.6	-73.7		12.4
Customs	65.9	-62.7	-83	34.1
Medical services	90.9	-51.0		9.1
Registry and permit services (civil registry for birth, marriage...)	94.7	-45.9		5.3
Tax revenue	64.9	-45.6	-68	35.1
Political parties	62.2	-40.7	-35	37.8
Business/ private sector	68.0	-35.6		32.0
The military	64.5	-29.2	+21	35.5
Education system	90.4	-26.6		9.6
Parliament/Legislature	36.4	-17.6	-24	63.6
Media	55.3	-16.2	-13	44.7
Religious bodies	90.3	-0.7	+29	9.7
Utilities (telephone, electricity, water, etc.)	42.8	+0.7		57.2
NGOs (non governmental organizations)	57.6	+24.1	+59	42.4

Global corruption barometer asked respondents to rate the integrity of various institutions on a scale from 1(not at all corrupt) to 5 (extremely corrupt).

The table 3 above illustrates that:

- The legal system/judiciary were considered the most corrupt sector, followed by the police and customs. Comparison to results of the 2005 survey¹ shows that these are consistently perceived to top the list of most corrupt institutions.
- Other public sectors are not perceived as very trustworthy, including political parties. The utility sectors and religious bodies are the only exception.
- The most trusted institutions are NGOs.
- Respondents are least aware of the *parliament/legislature*.

HOW MANY CAMBODIANS REPORTED THAT THEY PAID A BRIBE LAST YEAR?

Table 4: One third of respondents claimed that one of their household members paid a bribe in the last 12 months?

In the past 12 months, have you or anyone living in your household paid a bribe in any form?	Percent
Yes	36.2
No	62.1
DK	1.6
NA	0.1
Total	100.0

¹ Center for Social Development, 2005. *Corruption and Cambodian Households: Household Survey on perceptions, attitudes and Impact of everyday Forms of Corrupt Practices in Cambodia*.

About one third of respondents claimed that during the last 12 months one of their household members paid a bribe in any form. The medium low and the medium high income respondents more frequently reported having paid a bribe than other income classes.

Table 5: 75% of respondents who reported bribe payments during the last 12 months paid less than US\$ 30 in total

What was the approximate amount of money paid overall in bribes by your household in the past 12 months?*	Percent
Under 30 USD/approximately under 25 Euro	75.1
30 - 49 USD/25 - 39 Euro	5.1
50 - 74 USD/40 - 59 Euro	5.0
75 - 99 USD/60 - 79 Euro	2.0
100 - 149 USD/80 - 119 Euro	4.0
150 - 199 USD/120 - 159 Euro	0.3
200-299 USD/160 - 239 Euro	3.1
300 - 499 USD/ 240 - 399 Euro	1.5
500 - 749 USD/ 400 - 599 Euro	1.3
750 - 999 USD/ 600 - 799 Euro	1.4
1000 USD or more/ 800 Euro or more	0.9
DK/NA	0.5
Total	100.0

*This based on 36.2% of respondents, who reported that they paid a bribe in any form.

Among respondents who paid a bribe, 75.1% reported that the amount was less than 30US\$, while 13% paid from 100US\$ up to more than 1,000US\$.

Table 6: Two thirds of bribes were directly asked for and were paid to receive a service that the giver was entitled to

Which of the following applied to the bribes paid in the last 12 months?	Yes	No
A bribe was directly asked	69.9	30.1
A bribe was offered to avoid a problem with the authorities	42.1	57.9
A bribe was offered to receive a service entitled	68.5	31.5

69.9% of respondents explained that the bribe was directly asked. On the other hand, 68.5% mentioned that they offered a bribe to receive a service entitled. The receivers and givers almost totally corresponded, which implies that, in at least one out of five cases, services in Cambodia are associated with explicit bribe requests by the service provider and that Cambodians honor these requests because they feel that not paying is not an option if one wants the service, irrespective of 'entitlement'.

Annex 1: Demographics (weighted)

Annex 2: Questionnaire

VOICE OF THE PEOPLE 2005

ID Number: Columns 1-4

INTRODUCTION:

Your usual introduction, but add:

Gallup International is conducting the Voice of the People survey in more than 60 countries around the world, asking people like you for their views and opinions.

Now we would like to ask you a few questions about corruption. In this survey we are using corruption to mean the abuse of entrusted power – by a public official or a business person for example – for private gain. This could include material gain or other benefits.

1. Some people believe that corruption affects different spheres of life in this country. In your view, does corruption affect... not at all, to a small extent, to a moderate extent or to a large extent?

READ OUT AND ROTATE. SINGLE CODE FOR EACH

4. To what extent do you perceive the following sectors in this country to be affected by corruption?

Please answer on a scale from 1 to 5 (1 meaning not at all corrupt, 5 meaning extremely corrupt). Of course you can use in-between scores as well.

- 2 Urban (2000+ inhabitants)

Weighting :

Please correct any imbalances in your data by weighting before sending it, so that you provide a representative sample of the population (or a representative sample of the stated universe, if this is not a total population sample).

Each individual respondent's weight needs to be written onto columns 141-151 of the record. The first 4 columns (141-144) will refer to the *whole number* (including leading zeros). Column 145 contains the *decimal*. Finally columns 146-151 must contain the *decimal places* (including zeros).

See these examples:

Respondent with a weight of 2.4567 must have 0002.456700 in columns 141-151
Respondent with a weight of 122.001 must have 0122.001000 in columns 141-151.
